L16 ANSWER 2 OF 2 CAPLUS COPYRIGHT 2003 ACS on STN DUPLICATE 1

AB Constitutive NF- κ B activity varies widely among cancer cell lines. In this report, the authors studied the expression and the role of different I κ B inhibitors in adenocarcinoma cell lines. High constitutive NF- κ B activity and low I κ B- α expression was found in a no. of these cell lines. Moreover, some of these cells showed a high p100 expression, responsible for the cytoplasmic sequestration of most of p65 complexes. Treatment of these cells with TNF- α or other NF- κ B activating agents induced only weakly nuclear NF- κ B activity without significant p100 processing and led to a very weak transcription of NF- κ B-dependent reporter gene. Induction of NF- κ B activity can be restored by expression of the Tax protein or by treatment with **antisense** p100 oligonucleotides. In MCF7 A/Z cells stably transfected with a p100 expression vector, p65 complexes were sequestered in the cytoplasm by p100. These cells showed a reduced nuclear NF- κ B induction and NF- κ B-dependent gene transcription following TNF- α stimulation. As a consequence of a competition between I κ B- α and p100, cells expressing high levels of p100 respond poorly to NF- κ B activating stimuli as TNF- α .
